JED MANALOTO

BACKEND DEVELOPER | PUBLIC COPY

GitHub: github.com/Jedskibidi

PROFILE

Backend developer and computer science student focused on server-side web development with PHP, Laravel, Node.js, and Express.js. Interested in building clear application logic, structured databases, and maintainable web applications.

TECHNICAL SKILLS

Backend	PHP / Laravel / Node.js / Express.js
Database	MySQL / SQLite
Supporting skills	JavaScript / React / HTML / CSS / Git

SELECTED PROJECTS

Moodoro

PHP, MySQL, JavaScript, face-api.js | Solo developer

A Pomodoro task manager that detects your mood through your webcam, helping users see how their focus sessions affect how they feel.

- Integrated face-api.js to read facial expression before and after each focus session.
- Built reports showing mood trends, hours focused, and day streaks.

Wesync

Node.js, Express, Socket.IO, JavaScript | Solo developer

A web app for listening to music together while far apart, where everyone in a room hears the same song at the same moment.

- Built room creation with a 4-character room code and a shareable invite link.
- Implemented real-time synchronized playback so all listeners in a room stay in sync.

Authentiwrite (in progress)

Node.js, Express, SQLite, JWT, React, Vite

A web-based essay writing system that logs the writing process and gives teachers an explainable risk indicator, never an accusation.

- Building the server with Express and SQLite (better-sqlite3), with JWT authentication and role-based access for teachers and students.
- Designing an event logger for typing, pastes, pauses, revisions, and focus changes, and a scoring engine where every point maps to a human-readable flag.

EDUCATION

Bachelor of Science in Computer Science (graduating)

Pampanga State University

Associate in Computer Technology (completed)

Pampanga State University
